

PHISHING AWARENESS TRAINING

Recognizing phishing attacks, fake websites, and social engineering

Presented by:
Nivedhika S

What is Phishing?

Definition:

Phishing is a type of cyberattack where attackers pretend to be trusted individuals or organizations to trick people into revealing sensitive information such as:

- Passwords
- Bank account details
- Credit card information
- Personal data

Common Types of Phishing:

- Email Phishing
- SMS Phishing (Smishing)
- Voice Phishing (Vishing)
- Social Media Phishing
- Spear Phishing (Targeted attacks)

How to Recognize Phishing Emails

Warning Signs:

- Unknown or suspicious sender email address
- Urgent messages like "Your account will be closed"
- Spelling and grammar mistakes
- Requests for passwords or OTPs
- Suspicious attachments
- Links that don't match the official website
- Offers that seem too good to be true

How to Identify Fake Websites

Check Before You Enter Information:

- ✓ Verify the website URL carefully
- ✓ Look for HTTPS (secure connection)
- ✓ Watch for misspelled domain names

Example:

✗ www.paypa1.com

✓ www.paypal.com

- ✓ Avoid websites with poor design or many spelling errors
- ✓ Never enter passwords on unfamiliar websites

Social Engineering Tactics

What is Social Engineering?

Social engineering is the psychological manipulation of people into revealing confidential information.

Common Tactics:

Authority 🏢

Pretending to be your manager or IT department.

Urgency ⌚

"Your account will expire in 10 minutes."

Fear ⚠️

"Your bank account has been hacked."

Curiosity ?

"You received an invoice."

Reward 🏆

"You won a free smartphone."

Best Practices to Avoid Phishing

Stay Safe by Following These Tips:

- Never share passwords or OTPs.
- Verify the sender before responding.
- Hover over links before clicking.
- Enable Multi-Factor Authentication (MFA).
- Keep your software updated.
- Use antivirus software.
- Report suspicious emails to your IT department.
- Delete phishing emails immediately.

Real-World Examples

Example 1: Fake Bank Email

The attacker sends an email asking users to verify their account by clicking a fake banking website.

Goal: Steal login credentials.

Example 2: Fake Delivery Message

"You missed your parcel. Click here to reschedule."

The link installs malware or steals payment information.

Example 3: CEO Fraud

An employee receives an email appearing to be from the company CEO requesting an urgent money transfer.
